### Prepared by:

Andrew McAusland Facilities Maintenance Supervisor City of Maple Ridge

#### INTRODUCTION

Maple Ridge Parks, Recreation & Culture, Facilities Department, provides well water under permit by the Fraser Health Authority (FHA). As required by Section 15 of the British Columbia Drinking Water Protection Act, this document is the Maple Ridge Parks, Recreation & Culture Facilities Department annual report on the Small Drinking Water systems that the City operates on behalf of users at Whonnock Lake Park – 11350 Graham St., Whonnock

#### OUTLINE

Well identification number - 1704 GPS location of well head - Lat: 49.208341 Long:122.44851

Whonnock Lake Park well is 80 ft. 10 inches deep and provides fresh water for park users. The pump house is located southwest of the cook shelter and contains the pressure tank and switch; filter tank and head; flow meter, check valve and locking gate valve; softener tank with salt and removable fuse. The well head is mechanically sealed with padlocks.

### **EQUIPMENT**

- Pressure tank and switch
- filter tanks
- UV light
- water meter
- softener tank
- Pump

### **FACILITY MAINTENANCE**

This well is maintained by the Maple Ridge Parks, Recreation & Culture, Facilities Department. A qualified Small Water System Operators provides security, monitoring, maintenance, upgrades and emergency response to all of Parks & Facilities small water systems.

### **ROUTINE WATER SAMPLING**

Water samples are taken from each location every Tuesday morning by the Operations Department and a courier delivers these samples on the same day, to the Metro Vancouver laboratory in Burnaby. The Metro Vancouver lab sends the results to the City of Maple Ridge and the Fraser Health Authority by e-mail. The results are reported weekly unless an indicator is found in the sample. In this event, a communication from the Metro Vancouver lab is issued on the Wednesday (Thursday latest) to the City of Maple Ridge.

It is important to note that this monitoring program provides a representative picture of drinking water quality in the well system to the tap only.

### **ADVISORIES**

In the event of a concern discovered upon analysis, the Metro Vancouver Water Department lab will email until the report has been received by the City of Maple Ridge. The communications should follow the following list until a response has been assured:

1. Michael Albrecht	604 363 6671 cell
2 Andrew McAusland	604 788 6543 cell

3. Michael Millward 604-619-8314 cell 604-467-7385 office

604-467-7476 office

4. David Boag 604-619-8315 cell 604-467-7344 office

### Fraser Health Authority contact info:

Binny Sivia - Public Health Officer 604-870-7902

If required, the well is shut down immediately and a notice will be posted advising the users that the water is not potable until further notice.

### **EMERGENCY MEASURES:**

### **Response instructions**

- Keys, devices and signs are taken to the location described in the alarm advisory and the water valve is physically shut off and locked out.
- Signs are posted at all entrance doors, informing the public of the water shut-off.
- The date of the notice and the responding staff's initial should be written on each posting.
- The Booking Clerk and Caretakers are responsible for informing the user groups who may have been exposed to the drinking water conditions since the last favorable analysis.
- Binny Sivia (Public Health Inspector) is to be notified at 604-870-7902 within one business day.
- Inform Michael Millward (604-467-7385), and David Boag (604-467-7344) when the above steps have been completed.
- City Water Works (604-467-7393) must be contacted to arrange an immediate sample taken for retest.

All inquiries from the media and public must be referred to the Parks and Facilities Director (604-467-7344).

### **Bacteriological Monitoring Standards**

Weekly samples are analyzed for fecal coliform, total coliform and heterotrophic plate count (HPC) and response is made according to provincial guidelines.

Table 1. BC Drinking Water Protection Regulation Microbiological Standards

Parameter	Occurrence	Standard
Fecal Coliform	1 sample	Less than 1 fecal coliform per 100mL
E.coli	a) 1 sample in a 30 day period	0 E.coli per 100mL
	b) more than 1 sample in a 30 day period.	At least 90% of samples have 0 E.coli per 100mL and no sample has more than 10 E.coli per 100mL

## Arsenic in Drinking Water

Arsenic is found naturally in the rocks in the earth's crust. It can be found in some drinking water supplies, and wells. Drinking water containing arsenic can have serious short-term and long-term health effects.

## How does arsenic get into drinking water?

Arsenic can get into drinking water from natural deposits or runoff from agriculture, mining and industrial processes.

In B.C., natural minerals are the most common sources of arsenic in drinking water.

The amount of arsenic in ground water supplies like wells is usually higher than in surface water supplies such as lakes, streams and rivers.

## What are the health effects of arsenic exposure?

Short to medium term (days to weeks) exposure to very high levels of arsenic in drinking water can lead to arsenic poisoning.

Symptoms of exposure to high levels of arsenic include stomach pain, vomiting, diarrhea, and impaired nerve function, which may result in 'pins and needles' sensation or numbness and burning in hands and feet.

Arsenic can also cause skin changes, which include darkening, and wart-like or corn-like growths. These are mostly found on the palms of the hands or bottoms of the feet. Other symptoms can include skin flushing and rashes.

As children tend to drink more water per unit of body weight than adults, they may have more exposure to arsenic in drinking water. As a result children may be at greater risk of illness when higher levels of arsenic are present. Long-term (years to decades) exposure to even relatively low amounts of arsenic in drinking water can increase your risk of developing certain cancers, including:

- · skin,
- · lung,
- · kidney,
- · bladder, and
- liver.

The risk of cancer is the reason for developing the Canadian guideline for arsenic in drinking water. For more information on The Guidelines for Canadian Drinking Water Quality see, www.canada.ca/en/health-canada/services/publications/healthy-living/guidelines-canadian-drinking-water-quality-guideline-technical-document-arsenic.html.

## What amount of arsenic causes health effects?

Health Canada set a Maximum Acceptable Concentration (MAC) of 10 micrograms per litre for arsenic in drinking water. This can also be reported as 10 μg/L, or as 0.010 milligrams per litre (mg/L).

This level was set based on the ability to treat water practicably to this level. This amount is still linked with a health risk higher than the level considered to be a very minor risk. For this reason people should consider taking precautions with their drinking water even if the arsenic levels are slightly below the guideline. Data collected in Canada indicates that the levels of arsenic in drinking water is usually less than 0.005 mg\L, but concentrations may be higher in some areas.

## How do I know if there is arsenic in my drinking water?

Public drinking water systems are monitored regularly. In drinking water, arsenic has no odor or taste and can only be detected by a chemical test.

Most private wells are not tested routinely for water quality or contaminants. It is the well owner's responsibility to test the water for arsenic. Any well may contain arsenic or other contaminants. Private wells should be tested regularly for water quality.

Contact your local public health unit or environmental health officer for information on the testing process in British Columbia.

For more information about private well water testing, see <u>HealthLinkBC File #05b Should I Get</u> My Well Water Tested?

## What can I do if there is arsenic in my drinking water?

Water with arsenic is only a concern if it is being used for drinking or preparing food.

Exposure through breathing and skin contact is not harmful. For example, there are no known health effects from hand washing, bathing or washing clothing in water with arsenic.

If an initial test detects arsenic, even at levels below the guideline, it is important to have a second test done to confirm the results. If your water tests positive for arsenic above the recommended level, you should use another source for drinking water or treat the current source.

There are several treatment devices and options including reverse osmosis filters and distillation. Chlorination and mechanical filters do not remove arsenic from water. Boiling water may increase the concentration of arsenic.

There is no regulatory control over treatment devices for private homes, therefore the well owner must be careful and select an appropriate treatment device that has been certified for the removal of arsenic.

When purchasing a treatment device, you should consider one that has been certified by an organization accredited by the Standards Council of Canada (SCC). The treatment device should meet the following standards:

- NSF/ANSI Standard 62 on drinking water distillation and adsorption systems; or
- Standard 58 on reverse osmosis drinking water treatment systems; or
- Standards 53 on drinking water treatment units

   with specific designation for the water quality parameters you are trying to remove (arsenic).

Certification assures that a device works as the manufacturer or distributor claims. Find an up-to-date list of accredited organizations by visiting Standards Council of Canada at <a href="https://www.scc.ca/en/accreditation/product-process-and-service-certification/directory-of-accredited-clients">www.scc.ca/en/accreditation/product-process-and-service-certification/directory-of-accredited-clients</a>.

For more information on drinking water and treatment options, contact your local environmental health officer.

#### For More Information

For more information about arsenic and drinking water, visit:

#### Notes To Clients:

 Mar 27, 2020 - The analysis of water sample 1415337-1 is below Maximum Acceptable Concentrations for the chemical and bacteriological health related guidelines specified by the June 2019 Guidelines for Canadian Drinking Water Quality for the parameters tested.

### Guidelines

Guideline Description Health Canada GCDWQ

Guideline Source Guidelines for Canadian Drinking Water Quality, Health Canada, June 2019

Guideline Comments MAC = Maximum Acceptable Concentration

AO = Aesthetic Objective

OG = Operational Guideline for Water Treatment Plants

(does not apply to private groundwater wells).

Refer to Health Canada for complete guidelines at www.hc-sc.gc.ca

#### Comments:

 Mar 27, 2020 - The analysis of water sample 1415337-1 is below Maximum Acceptable Concentrations for the chemical and bacteriological health related guidelines specified by the June 2019 Guidelines for Canadian Drinking Water Quality for the parameters tested.

> The comparison of test results to guideline limits is provided for information purposes only. This is not to be taken as a statement of conformance / nonconformance to any guideline, regulation or limit. The data user is responsible for all conclusions drawn with respect to the data and is advised to consult official regulatory references when evaluating compliance.

Please direct any inquiries regarding this report to our Client Services group.

Results relate only to samples as submitted.

The test report shall not be reproduced except in full, without the written approval of the laboratory.
